Backend integration

- connect the flask app to a remote database
    - Using the flask framework we can connect to database, insert into, and do queries using python.
    - for the login page, the method type is going to be "POST" write a function that handles "POST" Methods in flask.
    - for now we can store username or email and password as strings to start.
    - We can host the MYSQL database using Heroku's ClearDB
